

This index to volumes 181 and 182 of *American Nurseryman* covers all feature articles, as well as News, Pest Control, CyberGuide, Workforce and Field Notes departments. Articles are indexed by subject, starting here, and by author, starting on page 60. This year, subject headings have been revised to more accurately reflect content. Several new topic categories have been created and others have been combined, eliminated or reclassified. For example, an article reporting hurricane damage would no longer appear under "News" but could be found under "Weather/Disasters." In addition, articles have been classified only once instead of under multiple categories, as they have been in the past, so check related categories for articles of interest if you cannot find them under a particular topic. We hope you find the index useful in reviewing past articles of *American Nurseryman*.

For copies of any article or a back issue, call the subscription dept. at (800) 621-5721. The cost is \$5 per issue mailed in the US, \$6 per issue to Canada and \$7 per issue for all others. Articles in *American Nurseryman* are also put on microfiche by University Microfilms Inc. and can be found in many university libraries. UMI may be reached at (800) 521-3044.

If you don't have snow, sleet, hail, heat, heavy rain, or wind then your customers don't need the Plant House™.

All season protection lets you begin your sales season six to eight weeks earlier with the Plant House™.

This durable, portable, miniature greenhouse protects young plants from harsh, destructive weather conditions year around. The three-piece, molded plastic, water-filled unit with vented lid provides a consistent, protective environment that ensures healthier plants, bigger blooms, and a longer growing season. Boost your spring sales season profits by ordering the Plant House™ now!

CALIPRO
TREE MEASURING
INFORMATION SYSTEM

**Fast Accurate
Inventory**

**From computer...
in the field...
to finished reports**

Calipro™ is a revolutionary new nursery tool, combining a computerized inventory system and a tree caliper capable of measuring trees up to 6 inches in diameter. In the field, Calipro electronically records tree variety, size, location, and grade; then transfers that information into Calipro software in your computer to sort into useful reports.

It's a deer-eat-tree world out there!

Now you can protect your reforestation program from various animal browsing damage with Ani-Pel products. Simply drop an Ani-Pel tablet into the root system of newly planted seedlings, with the knowledge that the plant will be protected by becoming systemically distasteful to browsing animals.

SEEDLING PROTECTION SYSTEMS

Ani-Pel, Ani-Pel Plus and Ani-Spray are registered trademarks of MacFarlan Smith Limited

Environmentally safe

These environmentally safe products are non-toxic and highly effective in deterring animals from browsing on treated plants. Topical treatments protect only existing growth but Ani-Pel protects succulent new growth, as well.

Wildlife safe

Ani-Pel™, Ani-Pel Plus™ and Ani-Spray™ are not harmful to animals. The taste discourages browsing and eating treated plants.

Try Ani-Pel

Put Ani-Pel products to the test in your own plantings or problem areas. For information and pricing phone, fax or write.

WHEN IT COMES TO TREES, OUR ROOTS GO DEEP.

At Speer & Sons Nursery, we've been around awhile. We're proud to say our customers have been getting consistently superior service, quality and prices since 1948. And now we have even more shade and flowering trees to choose from than ever before.

Guess you could say we've got a limb up on the competition.

UTILITREES™

Trees worthy of the
Utilitrees™ design-
ation are ideal
for use in the
restricted zone
between street and
sidewalk and
beneath utility
lines.

**Leprechaun™
Ash**

**Red Jewel™
Crabapple**

Compact or
upward in
branching habit,
and maturing at
25 feet or less, all
have proven
tough and adapt-
able to city street

conditions. We are actively pro-
moting the use of these trees to
utility companies, urban
foresters and
landscape archi-
tects.

**Crimson Cloud
Hawthorn**

A special
Utilitrees™ point-
of-sale tag is
available to help
our customers market this
select line of street-wise trees
to consumers.

Greenhouse Bench And Shade Lathing

Effective Shade Control.

Ideal protection against frost and wind damage. Gives uniform sun and moisture control. No stretching or tearing. Long-lasting. Simple construction. 55% shade density. Also available in 70% density.

Pressure Treated Greenhouse Benches.

Assembles in minutes! Stays clean. Dry. Allows good moisture control. Plants stay healthier because problems with mildew, fungus, snails and slugs are eliminated. 55% closed area. 45% open space for drainage. Only 1-1/4" space between pickets. Also available in 70% closed area.

Pressure treated lathing is made from specially selected grade "A" wood pickets (3/8" thick by 1-1/2" wide) woven securely with seven twisted cables of galvanized wire for 6' width (five for 4' width). These choice pickets are available hot-dipped in a red oxide, weather resistant stain, or natural finish. Please specify. Do not confuse this product with snow fencing and its much wider spacing—over 2-1/4" apart. Write for prices.

SOMETHING NEW

Phlox subulata 'Laurel Beth'

A variegated form of the always popular creeping phlox, this is truly a beautiful new plant, 'Laurel Beth' brings year round color to a plant traditionally only noticed while in bloom.

'Laurel Beth' has white leaf margins that are contrasted with red stems. Growing tips have a rosy red hue which becomes more noticeable during the winter months. It produces a mass of Rosy Red blooms with darker centers in the early Spring. This is a vigorous grower with few pest or disease problems.

We took the name from Mary's granddaughter who was born with a lock of white in the center of her hair. We think this plant is just as unique as she was the first time we saw her.
